The SVJour document class users guide supplement for *Calcolo*

11 October 1998

1 Introduction

This document describes the *calco* option for the SVJour LaTeX 2_ε document class. For details on manuscript handling and the review process we refer to the *Instructions for authors* in the printed journal. For style matters please consult previous issues of the journal.

2 Initializing the class

As explained in the main *Users guide* you can begin a document for *Calcolo* by including

```
\documentclass[calco]{svjour}
```

as the first line in your text. All other options are also described in the main *Users guide*.

3 Extra commands

There is only one additional command:

`\subclass{⟨classification⟩}`

It is needed to specify the *Mathematics Subject Classification* at the end of the abstract. This command is similar to `\keywords` and should appear as the last command inside the *abstract* environment.
